## **Bug Report for Wiki Mobile App**

This document highlights the issues identified during exploratory testing of the Wiki Mobile App. Each issue is categorized with its observed behavior and the expected resolution to improve the application's user experience.

### **Application Crash on Home Page Interaction**

Issue: The application crashes when the user starts interacting with the home page immediately after it loads.

Expected Behavior: Ensure the application remains stable and responsive upon interaction immediately after loading.

### **Images Not Loading**

Issue: Images in the posts fail to load and always display the error 'An Error Occurred'.

Expected Behavior: Fix the image loading functionality to ensure all images are displayed correctly.

### **Search Results Error**

Issue: Clicking on any search result leads to an 'An Error Occurred' message.

Expected Behavior: Allow search results to open properly without errors.

### **Explore Items Error**

Issue: Clicking on any explore item shows 'An Error Occurred'.

Expected Behavior: Ensure explore items are accessible and display content as expected.

### **Explore Download Links**

Issue: Download links under Explore do not work.

Expected Behavior: Enable and validate the functionality of download links under Explore.

### **Non-Clickable Explore Items**

Issue: Some explore items and their menus are not clickable.

Expected Behavior: Make all explore items and their menus interactive.

### **History Items Error**

Issue: History items display an error.

Expected Behavior: Fix the functionality to ensure history items load correctly.

### **Nearby Location Error**

Issue: Selecting 'Current Location' in Nearby results in an 'Invalid Value' error.

Expected Behavior: Resolve location errors and allow the app to fetch and use the current location properly.

### **Search Results Persistence**

Issue: Clicking on a search result and then returning does not show the previously opened list of search results.

Expected Behavior: Maintain the state of previously opened search results when navigating back.

### **Support Wikipedia Link**

Issue: The 'Support Wikipedia' link is non-functional.

Expected Behavior: Fix the link to redirect users to the appropriate support page.

### **No Landscape Orientation**

Issue: The app does not support landscape orientation.

Expected Behavior: Add support for landscape orientation for better usability on different devices.

### **Portrait Orientation Adjustment**

Issue: The app does not adjust properly when the device is tilted in portrait orientation.

Expected Behavior: Ensure the app dynamically adjusts to the device's portrait orientation.

### **View Disturbance on Larger Devices**

Issue: The view is disturbed on larger devices like tablets.

Expected Behavior: Optimize the app's UI for larger screens to ensure a consistent user experience.
